Corrigendum

Corrigendum to “HPV16 DNA status is a strong prognosticator of loco-regional control after postoperative radiochemotherapy of locally advanced oropharyngeal carcinoma: Results from a multicentre explorative study of the German Cancer Consortium Radiation Oncology Group (DKTK-ROG)” [Radiother. Oncol. 113 (2014) 317–323]

The authors regret that in the above-mentioned article an error occurred. In the original manuscript, it was stated that patients who were treated between 2005 and 2010 with a curatively intended cisplatin based PORT-C were included in this retrospective study.

The correct statement is that patients who were treated between 2004 and 2012 with a curatively intended cisplatin based PORT-C were included in this retrospective study. In each centre, the patients were included backwards from 2010 to 2005 or from 2012 to 2004 as HPV prevalence is increasing in recent years. All results presented in the manuscript remain unaffected.
